

Project Evaluation Rubric (Image Processing & Computer Vision)

Criteria	Max Marks	Description	Marks Awarded
Problem Definition & Understanding	4	Clarity, relevance, objectives	
Methodology & Technical Approach	5	Algorithm selection, justification, workflow	
Implementation & Coding	5	Working code, correctness, tools used	
Results & Analysis	5	Output quality, evaluation, interpretation	
Innovation / Complexity	2	Originality, advanced techniques	
Report & Documentation	3	Structure, clarity, completeness	
Presentation / Viva	1	Explanation and answering questions	

Instructions for Students

- Clearly define the problem and motivation.
- Explain the methodology with flowchart/pipeline.
- Show input-output images and comparisons.
- Use proper tools (Python, OpenCV, MATLAB, etc.).
- Avoid plagiarism; originality will be evaluated.
- Be prepared to explain your code during viva.
- Penalty: Copying without understanding may reduce marks.
